005306.P0?7 · Patent

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the

application:

Listing of the Claims:

1). (Original) A method, comprising:

synchronizing directly a computing device and an enterprise server, comprising;

retrieving a record extraction sequence from the server; and

extracting records stored on a database according to the record extraction

sequence, wherein the extracted records are not already stored on the

computing device.

2). (Original) The method of claim 1, further comprising:

logging-in to the server from the computing device, wherein the computing

device is a handheld device; and

retrieving a persistent node ID from the server for the handheld.

3). (Original) The method of claim 2, further comprising:

retrieving one or more views from the server that are not already on the

handheld device; and

retrieving one or more business objects from the server that are not already on

the handheld device.

- 4). (Original) The method of claim 3, further comprising: processing transactions on the server; and retrieving one or more events from the server that are not already on the handheld device.
- 5). (Original) The method of claim 4, further comprising:
 retrieving a PDA repository associated with the handheld device from the server.
- 6). (Original) A method, comprising: synchronizing directly a handheld device and an enterprise server, comprising; providing a record extraction sequence to the handheld; extracting records stored on a database according to the record extraction sequence, wherein the extracted records are not already stored on the handheld device; and providing the records to the handheld device.
- 7). (Original) The method of claim 6, further comprising:

 verifying the handheld device has a valid logon ID; and

 providing a persistent node ID to the handheld.
- 8). (Original) The method of claim 7, further comprising:
 providing one or more views to the handheld that are not already on the handheld device; and

005306.PC07

providing one or more business objects to the handheld that are not already on the handheld device.

9). (Original) The method of claim 8, further comprising:

processing transactions on the server; and

providing one or more events to the handheld that are not already on the

handheld device.

- 10). (Original) The method of claim 9, further comprising: providing a PDA repository associated with the handheld device to the handheld device.
- (Original) A system, comprising:means for synchronizing directly a handheld device and an enterprise server,comprising;

means for retrieving a record extraction sequence from the server; and means for extracting records stored on a database according to the record extraction sequence, wherein the extracted records are not already stored on the handheld device.

12). (Original) The system of claim 11, further comprising:

means for logging-in to the server from the handheld; and

means for retrieving a persistent node ID from the server for the handheld.

Application No. 09/820,509 Page 4 of 13 Amdt Date: 8/12/2004 Reply to Office Action of July 7, 2004 005306.P097 Patent

13). (Original) The system of claim 12, further comprising:

means for retrieving one or more views from the server that are not already on the handheld device; and

means for retrieving one or more business objects from the server that are not already on the handheld device.

14). (Original) The system of claim 13, further comprising:

means for processing transactions on the server; and

means for retrieving one or more events from the server that are not already

on the handheld device.

15). (Original) The system of claim 14, further comprising:

means for retrieving a PDA repository associated with the handheld device from the server.

16). (Original) A system, comprising:

means for synchronizing directly a handheld device and an enterprise server, comprising;

means for providing a record extraction sequence to the handheld;

means for extracting records stored on a database according to the record

extraction sequence, wherein the extracted records are not already stored

on the handheld device; and

means for providing the records to the handheld device.

- 17). (Original) The system of claim 16, further comprising:

 means for verifying the handheld device has a valid logon ID; and
 means for providing a persistent node ID to the handheld.
- 18). (Original) The system of claim 17, further comprising:
 means for providing one or more views to the handheld that are not already on
 the handheld device; and
 means for providing one or more business objects to the handheld that are not
 already on the handheld device.
- (Original) The system of claim 18, further comprising:
 means for processing transactions on the server; and
 means for providing one or more events to the handheld that are not already
 on the handheld device.
- 20). (Original) The system of claim 19, further comprising: means for providing a PDA repository associated with the handheld device to the handheld device.
- 21). (Original) A computer-readable medium having stored thereon a plurality of instructions, said plurality of instructions when executed by a computer, cause said computer to perform:

synchronizing directly a handheld device and an enterprise server, comprising; retrieving a record extraction sequence from the server; and

Patent

extracting records stored on a database according to the record extraction

sequence, wherein the extracted records are not already stored on the

handheld device.

005306.P007

(Original) The computer-readable medium of claim 21 having stored thereon 22).

additional instructions, said additional instructions when executed by a computer,

cause said computer to further perform:

logging-in to the server from the handheld; and

retrieving a persistent node ID from the server for the handheld.

(Original) The computer-readable medium of claim 22 having stored thereon 23).

additional instructions, said additional instructions when executed by a computer,

cause said computer to further perform:

retrieving one or more views from the server that are not already on the

handheld device; and

retrieving one or more business objects from the server that are not already on

the handheld device.

(Original) The computer-readable medium of claim 23 having stored thereon 24).

additional instructions, said additional instructions when executed by a computer,

cause said computer to further perform:

processing transactions on the server; and

retrieving one or more events from the server that are not already on the

handheld device.

005306.P007 Patent

25). (Original) The computer-readable medium of claim 24 having stored thereon additional instructions, said additional instructions when executed by a computer,

cause said computer to further perform,

retrieving a PDA repository associated with the handheld device from the

server.

26). (Original) A computer-readable medium having stored thereon a plurality of

instructions, said plurality of instructions when executed by a computer, cause said

computer to perform:

synchronizing directly a handheld device and an enterprise server, comprising;

providing a record extraction sequence to the handheld;

extracting records stored on a database according to the record extraction

sequence, wherein the extracted records are not already stored on the

handheld device; and

providing the records to the handheld device.

27). (Original) The computer-readable medium of claim 26 having stored thereon

additional instructions, said additional instructions when executed by a computer, cause

said computer to further perform:

verifying the handheld device has a valid logon ID; and

providing a persistent node ID to the handheld.

005306.P007 Patent

28). (Original) The computer-readable medium of claim 27 having stored thereon additional instructions, said additional instructions when executed by a computer, cause said computer to further perform:

providing one or more views to the handheld that are not already on the handheld device; and

providing one or more business objects to the handheld that are not already on the handheld device.

29). (Original) The computer-readable medium of claim 28 having stored thereon additional instructions, said additional instructions when executed by a computer, cause said computer to further perform:

processing transactions on the server; and
providing one or more events to the handheld that are not already on the
handheld device.

30). (Original) The computer-readable medium of claim 29 having stored thereon additional instructions, said additional instructions when executed by a computer, cause said computer to further perform,

providing a PDA repository associated with the handheld device to the handheld device.
